

Celenia Integration Framework

for Microsoft Dynamics NAV

Achieve intelligent integration between Microsoft Dynamics NAV and other applications inside and outside your enterprise.

Celenia Integration Framework provides you with a high-level integration architecture that delivers online access to Microsoft Dynamics NAV data and business logics (Codeunits).

Integrate your business

Celenia Integration Framework offers the ability to integrate the business processes that are currently not covered by Microsoft Dynamics NAV.

This could be:

- External partners looking up item availability on a website,
- Making contract information available on an intranet,
- Updating Microsoft Dynamics NAV with the latest exchange rates from an external web service,
- Call Center systems integration with contacts in Microsoft Dynamics NAV,
- Integration to other ERP systems, such as Microsoft Dynamics AX, SAP, Oracle.

Integration platform

Celenia Integration Framework is a scalable, secure and flexible integration platform for Microsoft Dynamics NAV, which enables you to build and expand the value of Microsoft Dynamics NAV by making business processes more efficient.

Robust architecture

Celenia Integration Framework offers a robust architecture designed for scalability and flexibi-

FEATURES

- > Framework installation

lity. It offers a .Net API for the Microsoft world and web services for non-Microsoft platforms like your Apache/Linux web server, your partner's Oracle Call Center application or your vendor's IBM iSeries manufacturing system.

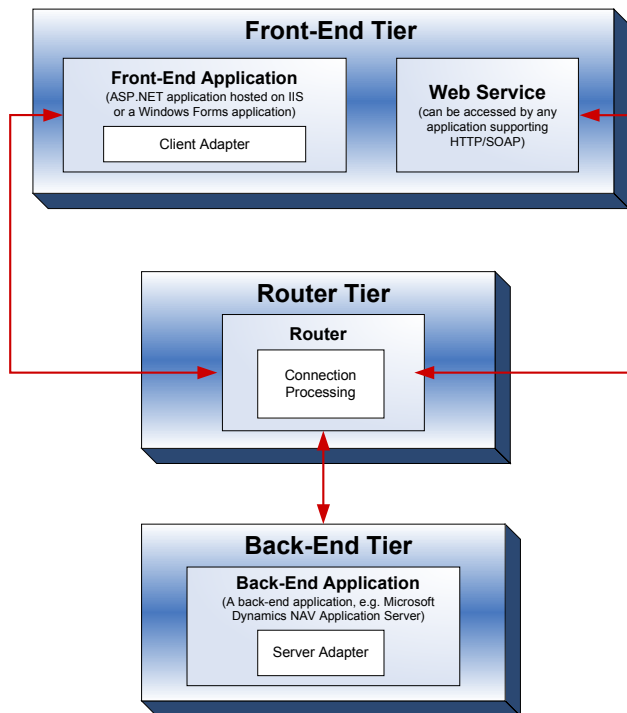

Celenia Integration Framework for Microsoft Dynamics NAV

Is it difficult to get started? Not at all!

With Celenia Integration Framework you can connect directly to Microsoft Dynamics NAV and have a session in your NAV application, you can reuse the work you have already done by calling existing code and reports and get the result back in your application. Is it difficult to get started? Not at all! Celenia Integration Frame-

work comes with sample applications where all the functionality is shown and the sample source code is available. Furthermore, Celenia Integration Framework offers in-depth documentation with "HowTo" sections to enable you to produce results faster.

ARCHITECTURE OF CELENIA INTEGRATION FRAMEWORK

1) Celenia Integration Framework offers a .Net API for the Microsoft world and web services for non-Microsoft platforms like your Apache/Linux web server, your partner's Oracle Call Center application or your vendor's IBM iSeries manufacturing system.

2) Handles functionality such as Load Balancing, the single reference point, and license control. The router is built to serve a large number of requests from diverse sources and route them to multiple Navision Application Servers, if required.

3) Integrated into Microsoft Dynamics NAV the back-end adapter process requests and executes business logic
